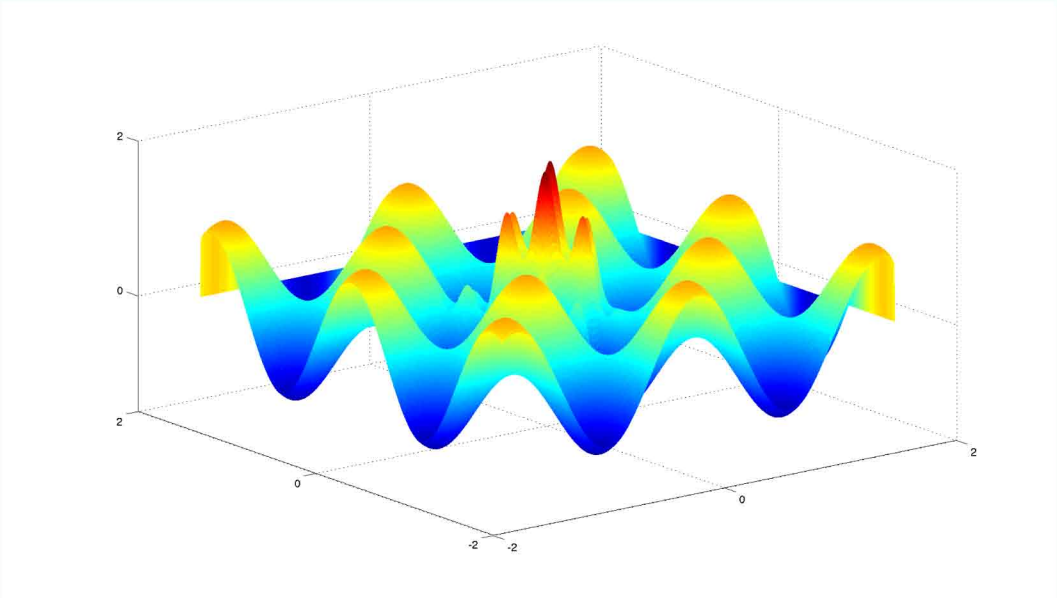
Math REU Course 4800: Spring Semester 2014
Selected Numerical Algorithms and Their Analysis
Instructor: Yekaterina Epshteyn



Description: Computational Mathematics is an essential part of modern applied sciences. The course will provide an introduction to the research in the area of the Numerical Analysis and Scientific Computing through lectures, students' presentations and projects.

Example of Topics: Selected topics in numerical linear algebra, introduction to numerical methods for partial differential equations involving interfaces and irregular domains, meshfree approximation methods.

Tuition Benefit: The department will provide up to $500 dollars to help cover tuition for this course.

Prerequisites: Permission of the instructor. This course is best suited for students familiar with basics of differential equations and some basics of numerical analysis. Some programming experience is desirable.

When & Where: M, W 1:25PM - 2:45PM, JTB 110

Instructor: Yekaterina Epshteyn (`epshteyn@math.utah.edu`)
